

Find and Replace Text

Technical Tip #029 (Software)

Find and replace text is a very useful feature when altering text parameters on large jobs that contain multiple lines of type. GravoStyle's™ version of this tool, unlike other programs, allows not only the text itself to be replaced, but also the character type and size.

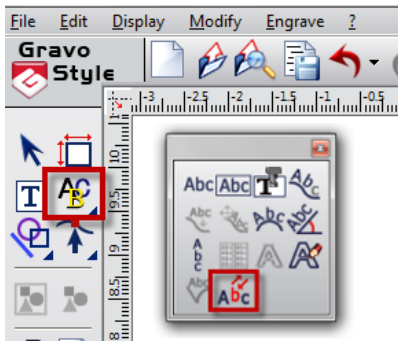

This tool is available from GravoStyle™6 and is standard in Industry, Graphic & 3D levels. For software upgrades and pricing please contact your local authorized Gravograph sales representative.

Step-By-Step Instructions

1. Create a new job and insert all text, logos, borders, etc.

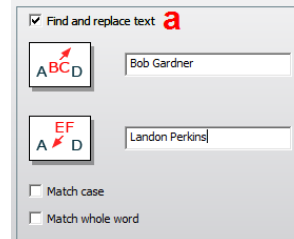

2. Click on the **Text Tools** icon which is located on the left toolbar then click on **Find and Replace Text**.

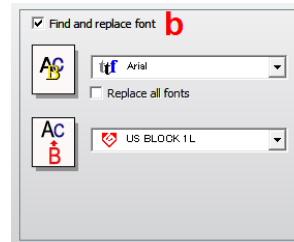

3. From the **Find and Replace Text** window, you will be given the following options:

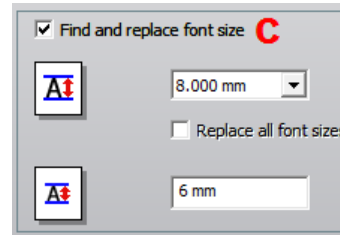

- a. **Find and replace text:** This allows you to type in a word and replace it with another. This section also gives you the option of match case and/or match whole word.

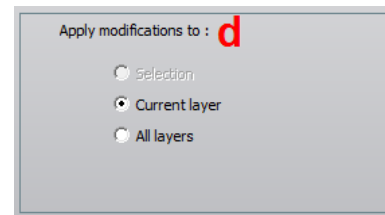

- b. **Find and replace font:** This allows you to replace one font style with another.

- c. **Find and replace font size:** This replaces one font size with another.

- d. **Apply modifications to:** You can apply any changes made in this window to just the current layer or all layers (if you have created a multi-layer job).

For any additional questions or concerns regarding this feature please contact Gravograph at the number below.
